

# ARXX™ HIGH PERFORMANCE WALLSYSTEMS

## E525

### Job Type

- › 40,000 sq. ft. main branch bank
- › backup power system
- › masonry & stucco finish
- › steel-trussed roof
- › 116 foot span achieved

### Keys to Decision

- › energy efficiency
- › winter construction

State Bank of Southern Utah, Cedar City, Utah **DISTRIBUTOR** › Blackburn & Associates

“I was impressed with the simplicity of construction and the strength of the Arxx Wallsystem. With the ease of construction and the product quality it is easy to see why Arxx is the industry leader.”

David D. Holmes  
Project Manager  
Blackburn & Associates

“The owners of this project wanted a quality building on the cutting edge of technology that would facilitate their needs for many years to come. Arxx was a clear cost-effective way to keep the owners ‘a grade above’ the rest. Another key factor to consider was due to our late fall construction

start we knew we would have to pour concrete in the middle of winter. We were able to do so without the expense of heating the walls to set the concrete.”

Brenda Lee Durbin  
Blackburn & Associates
